

# Sterile Alcohol

## with Water for Injection (WFI)

### -BRIEF DESCRIPTION-

CiDehol ST is a sterile 70% (v/v) USP isopropyl alcohol solution made with Water for Injection (WFI). It can be used to clean surfaces and equipment found in cleanroom areas within pharmaceutical, biotechnology, and medical device facilities or anywhere the use of a sterile, non-pyrogenic alcohol solution is required. CiDehol ST is filtered to 0.2 microns, bottled and double-bagged within a CLASS 100 cleanroom. It is gamma-irradiated to a sterility assurance level (SAL) of  $10^{-6}$ . Each lot is tested for sterility via USP 14- day sterility test and for bacterial endotoxin via the LAL test prior to release. A copy of lot specific documentation, which details QC, irradiation, sterility, and bacterial endotoxin limits, is attached to every case of CiDehol ST. All lots of CiDehol ST are guaranteed to contain less than 0.25 EU/mL, the endotoxin level criterion for WFI.

### - USE PROTOCOL -

Use in well-ventilated area. Hold spray bottle six to eight inches from surface and spray area until it is completely covered with solution. Or wipe CiDehol ST onto surface using cleanroom grade wipers. Allow to air dry.

### - INGREDIENTS -

70% Isopropyl Alcohol, USP  
30% Water for Injection, USP  
by Volume
