

Sterile Polyester Knit Wipers

w/Sealed Borders (ISO 3-5)

Gamma Wipe® 120

Berkshire Gamma Wipe® 120 is a knife-cut, high-sorbency, cleanroom laundered wipe recommended for use in environments rated ISO Class 4 and above. It is composed of 100% continuous filament polyester knit fabric. Each package is gamma irradiated sterile to a 10⁻⁶ Sterility Assurance Level. This combination of properties provides Gamma Wipe®120 with the high level of cleanliness, abrasion resistance and chemical compatibility required for cleaning critical sterile processing environments.

The same wipe material can be provided in pre-wetted formats for reduced VOC emissions, increased convenience, increased productivity, improved solvent control and cleaning protocol repeatability and reduced costs.

ANSI/AAMI/ISO procedures have been followed for verification of irradiation dose with audits being performed to monitor bioburden levels and dose. The Sterility Assurance Level (SAL) or the probability of a viable organism being present on a product unit after sterilization is a SAL of 10⁻⁶ (which is the chance of 1 non-sterile unit in 1,000,000).
