

SlimLine™ Cart System

with replacement 6-gallon Polypropylene Buckets, and Wringer

SlimLine™ Cart

The core of the SlimLine Cleaning System, this electropolished stainless steel cart is available with two or three polypropylene buckets.

The three 'grip-it' holders on the back of the cart allow for an easy inter-change and storage of handles and additional mop heads.

Slim-T™ Wringer

Designed to wring the SlimLine and T-Mop series as well as other flat pad mops. The Slim-T wringers simple design allows the operator to wring out excess liquid leaving the mop damp enough to effectively saturate the surface being cleaned.

The Slim-T is crafted from electropolished stainless steel for durability and long life. Autoclavable.

Ensuring a critical clean for critical applications relies heavily on the use of the correct tools. The SlimLine™ multiple bucket system guarantees correct disinfect, rinse and void stages in sterile and pharmaceutical processing. The option for use of multiple buckets also allows for increased clean and rinse options in high-tech environments.

- **Electropolished stainless steel**
- **Works with all shapes and sizes of mops**
- **Available without wringer for self-wringing mop systems**
